

af-x fireblocker

Suppliers of temporary and permanent high-quality power supply units integrates AF-X Fireblocker extinguishing systems.

Suppliers can make the right unit for any application that requires a temporary or permanent high-quality power supply. They carry a wide range of generators and offer excellent 24/7 service. Guaranteeing this service requires the choosing the right partners.

A gen-set, constructed in a 20ft container with a volume of 36 m³, for offshore power management purposes for example. The system contains one AF-X Fireblocker BM. One BM can protect 40 m³.

Modular

As per offshore regulations the AF-X Fireblocker has been equipped with a manual activation. After the renting period for this particular project is over, the system can be prepared for land projects by simply adding a detection device, turning the system into an automatically activated system. Should the system be needed in another generator, it can easily be disconnected and installed elsewhere. Compared to other systems, which are often bigger and more complex, AF-X Fireblocker offers quick and space-economical installation.

Compact

The interior design of gen-sets leaves little space for other installations, such as fire extinguishing systems. The dimensions of the AF-X Fireblocker BM are 25 x 25 x 30 cm, taking up a fraction of the space other systems use, such as gas suppression systems. Thanks to the integrated connector, the AF-X Fireblocker is a plug-and-play-system. Installation takes 1 day.

Technical data of the 20ft offshore power management container

- 6 meter long 2,5 meter wide with a height of 2,9 meter
- Internal volume 36m³
- 1x AF-X Fireblocker BM
- Manual activation with a panel

Prevent fire with AF-X Fireblocker.

Fire causes enormous damage. Most fires develop from a short circuit in, or overtaxing of engines or equipment. Unseen. Unnoticed. Undiscovered until late, and more often than not even far too late. AF-X Fireblocker is one of the few systems that operate from within and blocks the fire directly at the spot that until now could not be protected: right at the seat of the fire.

Built-in fireman

Originally developed for space travel, AF-X Fireblocker serves as a built-in fireman and swiftly blocks the fire with a dry aerosol compound. From the very first spark. Without using water. Completely harmless to man, beast and the environment and with no threat to business continuity. Low purchasing costs, low installation costs and low maintenance costs. No need for constructional provisions. Long life. No consequential loss. In other words: an annual cost saving of many, many euros.

af-x fireblocker | faster than fire.
