Indaver. Leading in sustainable waste management

Indaver offers high-quality, sustainable waste management solutions to large scale industry and public authorities. With its almost 1,700 employees Indaver manages 5 million tonnes of waste per annum, making the company one of Europe's most important players in sustainable waste management. Its steady, healthy growth ensures the company's continuity.

The job

Indaver has contracted Reijnhout Elektro for years now, so it was obvious choice to ask Reijnhout to realise a fire extinguishing system protecting several objects in various rooms. Although the rooms differed in size and state, Indaver was looking for a uniform system, ensuring uniform operation as well as minimal disruption of the primary business processes during installation.

The solution

For the fire safety of a number of rooms, our partner Reijnhout Elektro and its customer Indaver jointly decided on AF-X Fireblocker. After on-site visits and projection of the various rooms and cabinets to be protected Reijnhout Elektro installed both tailor-made solutions for the cabinets and area protection solutions in the MCC area. All systems were equipped with the same control panels for ease of operation purposes.

The AF-X Fireblocker system is based on a dry extinguishing agent. AF-X Fire Solutions offers smaller extinguishing units that can easily be fitted into cabinets and casings. Should the area to be protected be larger however, and therefore require larger units, AF-X Fire Solutions box units are highly effective and simple and easy to install.

Thus, using AF-X Fire Solutions products, Reijnhout Elektro was able to supply its customer Indaver with an effective, reliable and uniform fire extinguishing system.

Prevent fire with AF-X Fireblocker.

Fire causes enormous damage. Most fires develop from a short circuit in, or overtaxing of engines or equipment. Unseen. Unnoticed. Undiscovered until late, and more often than not even far too late. AF-X Fireblocker is one of the few systems that operate from within and blocks the fire directly at the spot that until now could not be protected: right at the seat of the fire.

Built-in fireman

Originally developed for space travel, AF-X Fireblocker serves as a built-in fireman and swiftly blocks the fire with a dry aerosol compound. From the very first spark. Without using water. Completely harmless to man, beast and the environment and with no threat to business continuity. Low purchasing costs, low installation costs and low maintenance costs. No need for constructional provisions. Long life. No consequential loss. In other words: an annual cost saving of many, many euros.
