Protecting an amphibian poses both regulatory and technical challenges. As soon as it concerns a ship and more than 12 passengers inland shipping rules regarding safety and equipment apply, while on the road the systems will soon have to comply with the UNE Regulation 107.

## **Prevent fire with AF-X Fireblocker.**

Fire causes enormous damage. Most fires develop from a short circuit in, or overtaxing of engines or equipment. Unseen. Unnoticed. Undiscovered until late, and more often than not even far too late. AF-X Fireblocker is one of the few systems that operate from within and blocks the fire directly at the spot that until now could not be protected: right at the seat of the fire.

### **Built-in fireman**

Originally developed for space travel, AF-X Fireblocker serves as a built-in fireman and swiftly blocks the fire with a dry aerosol compound. From the very first spark. Without using water. Completely harmless to man, beast and the environment and with no threat to business continuity. Low purchasing costs, low installation costs and low maintenance costs. No need for constructional provisions. Long life. No consequential loss. In other words: an annual cost saving of many, many euros.
